Suspension system and product holder for products

- 5 A suspension system for products comprises a base (1) for fixing to a wall of a space, provided with at least one product holder (10). On a first side the product holder is connected displaceably to the base (1) and on a second side comprises a suspension member (14,15) which is able to receive a product. The base comprises at least two mutually telescopic profiles (2,3), wherein on the first side the product holder is
- 10 connected to at least one of the profiles not only displaceably but also for rotation on a longitudinal axis (L).
